Subject: Glyphosate
Date: Thursday, May 25, 2017 4:28:28 PM

I am writing to tell you that zero is the only safe level of glyphosate. It is carcinogenic and accumulates in the bones. It causes liver disease. This chemical should not be allowed in our food supply. Europe has banned glyphosate. It has been found in breast milk in urine and clearly we as a nation are over exposed the health consequences are mounting. Please do your job which is to protect the people health by having a zero acceptable limit on this poison.

Sincerely,
Linda McLean
